Classification

Basic Concepts of Classification

- To '**classify**' means to assign some particular characteristic to the various member/part of a group and identify them on the basis of those particular characteristics only.
- Classification questions aim to test the skills of a candidate in determining the features of various things and candidate has to answer which one is odd-one from the group of 4 options. The odd-one option shouldn't possess the skill which must be common among other four options.
- Such questions are really scoring as they require minimum calculations (if verbal). So, let's understand how to solve various types of 'Classification' questions.
- All we have to do is identify the common feature in the 3 option. There can be various types of patterns which can be found in Classification questions. Some of those patterns are:

This common feature must be unique, ascertainable, non-imaginary and must not be present in odd-one option. While solving these questions, one should have basic awareness about general knowledge including Science, Geography, History, Mathematics etc.

Different Types of Questions asked in Competition Exams

1. Finding the Odd-Word : In such questions, four 'meaningful' words are given. These words can be found in dictionary. Apart from that, these have similar feature, based on that we're supposed to find the odd-word. For example:

1. a) Treachery
- b) Fraud
- c) Deceit
- d) Morbid

Answer: Here, we can see that all except Morbid are synonymous to each other as they all mean 'falsehood' while 'morbid' means 'diseased'. So, here we should have good vocabulary to solve such questions.

2. a) Feeling

- b) Joy
- c) Anxiety
- d) Anger

Answer: Here, Joy, Anxiety and Anger are all the type of Feeling. And, Feeling is a generic(or general) term. To solve this, we need good knowledge of adjectives.

- 3. a) Skull
- b) Appendix
- c) Pelvis
- d) Fibula

Answer: Here, All except Appendix are bones. While Appendix is an organ made of muscle. To solve this, we need basic knowledge of science.

2. Finding the odd-pair of words: In such questions, four options are given. Each option has a pair of words (that can be found in dictionary & hence meaningful). Each three pair depicts a relationship among each other and this relationship is common in all the four pairs but can't be found in 4th odd-one pair. We're supposed to find that odd-pair which doesn't possess that common relationship. **For example,**

- 1. a) Lion: Roar
- b) Snake: Hiss
- c) Frog: Bleat
- d) Bees: hum

Answer: In all the pairs, the second word is the sound made by the animal which is also the first word. But in the pair of frog: bleat, bleat is the sound made by sheep not frogs.

- 2. a) Protein: Marasmus
- b) Sodium: rickets
- c) Iodine: Goitre

- d) Iron: Anemia

Answer: In all the pairs, the second word describes the diseases, caused by deficiency of element which is first word. But in the pair of Sodium: Rickets, Rickets is being caused by deficiency of Vitamin D not Sodium.

- 3. a)** Valley: Depth

- b) Good: bad
- c) High: Low
- d) Black: white

Answer: Here, all the pairs contain the words which are antonym i.e. they mean opposite of each other. But, Valley & Depth are synonym to each other.

3. Finding the odd number: In such questions, four numbers are given. Each of the 3 numbers have common features like they are prime numbers or odd numbers or all divisible by '7' while the 4th number isn't so we have to identify that odd-number which doesn't have the feature the other four numbers have. **For example:**

- 1. a) 145
- b) 197
- c) 257
- d) 399

Answer: Here, all the numbers except 399 are of the form (Square + 1) like $257 \Rightarrow 16^2 + 1$ But $399 \Rightarrow 398 + 1 \Rightarrow 398$ isn't the square of any number.

- 2. a)** 3759
- b) 2936
- c) 6927
- d) 4836

Answer: Here, in all the options the pattern depicted is like this: Like in $3759 \Rightarrow (7+9) = 2 \times (3+5) \Rightarrow 16 = 2 \times 8$ But 2936 isn't following this pattern: $(2+6) \neq 2 \times (2+3)$

3. a) 5698

b) 4321

c) 7963

d) 4232

Answer: Here, '4232' is the only number where digits have been repeated while all other options have three different unique digits.

4. Finding the odd-pair of numbers: In such questions, four options are given. Each option has a pair of numbers. Each four pair depicts a relationship among each other and this relationship is common in all the three pairs but can't be found in 4th odd-one pair. We're supposed to find that odd-pair which doesn't possess that common relationship. **For example**

1. a) 140 - 45

b) 110 – 35

c) 100 – 30

d) 80 – 25

Answer: The pattern seen here is (first number – 5) $\div 3$ = Second number. like $140 - 45 \Rightarrow (140 - 5) \div 3 = 45$ But $100 - 30 \Rightarrow (100 - 5) \div 3 \neq 30$

2. a) 7: 26

b) 8: 30

c) 10: 35

d) 13: 44

Answer: Here, the pattern is: 2nd number = (1st number $\times 3$) + 5 Like in 7: $26 \Rightarrow 26 = 7 \times 3 + 5 = 26$ but in case 8: $30 \Rightarrow 30 \neq 8 \times 3 + 5$

3. a) 21-49

b) 24-64

c) 25-54

d) 81-36

Answer: 21 & 49 have 7 as common factor, 24 & 64 have 8 as common factor. 81 & 36 have 9 as a common factor while 25 & 54 have no common factor.

5. Finding the odd letters: In such types of questions, four options contain random group of letters. These random groups of letters have common pattern and this pattern is common in all the three options but can't be found in 4th odd-one. We're supposed to find that odd-one which doesn't possess that common pattern. For example,

- 1. a) DECB
- b) GDFE
- c) HKIJ
- d) JFHG

Answer: All except JFHG contain consecutive alphabets in random order.

- 2. a) ACZX
- b) BDYW
- c) EGVT
- d) CEUS

Answer: In all the groups except CEUS, 1st and 3rd letters occupy the same position from the beginning & end of alphabetical series respectively.

This method might look a bit time-consuming. You might think "It's better to solve those puzzles than going through such lengthy 4-5 questions". But wait, we can make these questions solving easy too:

Step I: Gather all the questions you can on the topic of Classification. Go through the questions given in the Gradeup app. Just gather all the questions from all the credible sources. Mind it, credible, because many sites/books give wrong answer to these questions and that can hamper your logical thinking.

Step II: After having selected bulk of questions, start practising the questions. Read the options, try answering without timing yourself. Check the answer, understand the logic. Start gradually and continue the practice.

Step III: After solving 50-100 questions, you'll start getting comfortable with the types of question patterns. It will take you less time to decipher the pattern.

Step IV: After practicing hundreds of questions with the techniques described above, you'll be able to attempt one classification question in hardly a minute, that too flawlessly. This is the mastery stage where you can solve any difficulty of statement-assumption, and classification becomes scoring section for you.

$9118 \rightarrow 18 = 9 \times (1 + 1) \rightarrow$ i.e. first number multiplied by succession of 2nd number.

$$8548 \rightarrow 48 = 8 \times (5 + 1)$$

$$7649 \rightarrow 49 = 7 \times (6 + 1)$$

But it's not applicable with **2437**.

Hence, option A is the correct answer.

Hence C

35. In the following question, select the odd number from the given alternatives.

- A. 306
- B. 270
- C. 132
- D. 240

Ans. B

Sol. All except '270' follow the same pattern:

$$\begin{aligned}306 &= 18^2 - 18 \\132 &= 12^2 - 12 \\240 &= 16^2 - 16\end{aligned}$$

Hence, the correct option is B.

36. In the following question, select the odd number from the given alternatives.

- A. 897
- B. 969
- C. 888
- D. 432

Ans. D

Sol. All the digits of number sum up to '24' except '432' i.e.

$$\begin{aligned}8 + 9 + 7 &= 24 \\9 + 6 + 9 &= 24 \\8 + 8 + 8 &= 24 \\4 + 3 + 2 &= 9 \text{ (odd one)}\end{aligned}$$

Hence, the correct option is D.

37. In the following question, select the odd word from the given alternatives.

- A. Washington
- B. New York
- C. Las Vegas
- D. Sydney

- C. ED
- D. KJ

Ans. A

Sol. Here in every option pair of alphabets are written with its predecessor except in option A.

Hence, the correct option is A.

39. Find out the odd word/letters/number/number pair from the given alternatives.

- A. 5306
- B. 2147
- C. 4205
- D. 4308

Ans. D

Hence, the correct option is D.

40. In the following question, select the odd letters from the given alternatives.

- A. PD
- B. LE
- C. IC
- D. DB

Ans. B

Sol.

$$PD \rightarrow 16 - 4 = 12$$

$$LE \rightarrow 12 - 5 = 7$$

$$IC \rightarrow 9 - 3 = 6$$

$$DB \rightarrow 4 - 2 = 2$$

here, the difference between 'LE' is only an odd number while in other three the difference is an even number.

Hence, option (B) is the correct response.

41. Find out the odd word/letters/number/number pair from the given alternatives.

- A. 286
- B. 374
- C. 143
- D. 279

Ans. D

$$Sol. 2 + 8 + 6 = 16$$

$$3 + 7 + 4 = 14$$

$$1 + 4 + 3 = 8$$

These numbers aren't divisible by 3 as their sum is not divisible by 3

Whereas, $2 + 7 + 9 + = 18$

Which is divisible by 3

Hence D

42. A series is given with one term missing. Choose the correct alternative from the given ones that will complete the series.

TYPE-IV

1. (4) Except the number 566, all other numbers are perfect squares.

$441 = (21)^2$

$484 = (22)^2$

$529 = (23)^2$

$625 = (25)^2$

$\text{But, } 566 = (23. 79)^2$

2. (4) $232 + 111 = 343$

$343 + 111 = 454$

$454 + 111 = \boxed{565}$

$565 + 111 = 676$

The number 564 does not belong to the series.

3. (2) The number 14 is an even number.

4. (1) The given number series is based on the following pattern :

$4 + 6 = 10$

$10 + 12 = 22$

$22 + 24 = 46$

$46 + 48 = \boxed{94}$

$94 + 96 = 382$

5. (4) Except 66, all other numbers are odd.

6. (1) $6 + 7 = 13; 13 + 5 = 18$

$18 + 7 = 25; 25 + 5 = 30$

$30 + 7 = 37; 37 + 5 = \boxed{42}$

Thus, the number 40 does not fit into the given series.

7. (2) $3 + 8 = 11$

$11 + 6 = 17$

$5 + 7 = \boxed{12}$

$12 + 9 = 21$

Therefore, the number 14 is wrong in the group.

8. (3) Except the number 279, all other numbers are completely divisible by 11.

$\frac{22}{11} = 2; \frac{33}{11} = 3;$

$\frac{66}{11} = 6; \frac{99}{11} = 9;$

$\frac{121}{11} = 11; \frac{594}{11} = 54$

$\text{But, } \frac{279}{11} = 25.36$

9. (3) Except the number 22, all other numbers are multiples of 3.

10. (3) $6 \times 3 = 18$

$18 \times 2 = 36$

$36 \times 3 = 108$

$108 \times 2 = 216$

$216 \times 3 = 648$

$648 \times 2 = \boxed{1296}$

$1296 \times 3 = 3888$

11. (2) $3 + 2 = 5$

$5 + 3 = 8$

$8 + 4 = 12$

$12 + 5 = 17$

$17 + 6 = 23$

12. (3) The number 49 is a Perfect Square.

Hence, 11 is wrong number.

13. (4) $44 - 6 = 38$

$38 - 3 = 35$

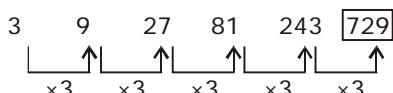

$35 + 2 = 37$

$37 + 11 = 48$

$48 + 28 = 76$

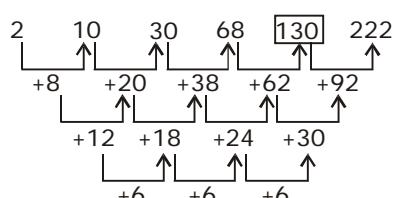

$76 + 59 = \boxed{137}$

14. (4)

Therefore, the number 730 is wrong in the series.

15. (2)

Therefore, the number 120 is wrong in the series.

CLASSIFICATION

16. (1) $462 - 42 = \boxed{420}$

$$420 - 40 = 380$$

$$380 - 38 = 342$$

$$342 - 36 = 306$$

Therefore, the number 422 is wrong in the series.

- 17.** (3) Except 1982, all others are completely divisible by four.

$$\frac{1956}{4} = 489; \frac{1968}{4} = 492;$$

$$\frac{1976}{4} = 494;$$

$$\frac{1988}{4} = 497; \frac{1992}{4} = 498$$

$$\text{But, } \frac{192}{4} = 495.5$$

18. (2) $27 = 3 \times 3 \times 3$

$$125 = 5 \times 5 \times 5$$

$$216 = 6 \times 6 \times 6$$

$$343 = 7 \times 7 \times 7$$

The number 216 is a perfect cube of an even number.

19. (1) $10 \Rightarrow 1 + 0 = 1$

$$13 \Rightarrow 1 + 3 = 4$$

$$234 \Rightarrow 2 + 3 + 4 = 9$$

$$681 \Rightarrow 6 + 8 + 1 = \boxed{15}$$

$$997 \Rightarrow 9 + 9 + 7 = 25$$

Consecutive square numbers are given.

20. (4) $3 \times 3 \times 3 = 27$

$$11 \times 11 \times 11 = 1331$$

$$5 \times 5 \times 5 = 125$$

Except, 81, all others are perfect cube numbers. The number 81 is a perfect square.

$$9 \times 9 = 81$$

21. (4) $17 + 6 = 23$

$$23 + 8 = 31$$

$$31 + 10 = 41$$

$$41 + 12 = 53$$

$$53 + 14 = \boxed{67}$$

- 22.** (1) **Option (1),**

$$1 \times 2 = 2$$

$$1 \times 4 = 4$$

$$1 \times 8 = 8$$

Option (2)

$$2 \times 3 = 6$$

$$2 \times 5 = 10$$

$$2 \times 7 = 14$$

Option (3)

$$3 \times 3 = 9$$

$$3 \times 5 = 15$$

$$3 \times 7 = 21$$

Option (4)

$$7 \times 3 = 21$$

$$7 \times 5 = 35$$

$$7 \times 7 = 49$$

- 23.** (1) The series is in increasing order.

$$27 + 9 = 36$$

$$36 + 9 = 45$$

$$45 + 27 = 72$$

So, the number 30 is wrong in the series. There should be

$$27 - 9 = 18$$

- 24.** (3) All the numbers are perfect squares. But the number 121 is less than its previous term.

$$225 = 15 \times 15$$

$$256 = 16 \times 16$$

$$121 = 11 \times 11$$

$$289 = 17 \times 17$$

$$324 = 18 \times 18$$

- 25.** (4) 31.02.1970 is a false date of birth. There are only 28 days in the month of February in a normal year.

26. (3) $12439 + 11110 = 23549$

$$23549 + 11110 = 34659$$

$$34659 + 11110 = 45769$$

$$45769 + 11110 = \boxed{56879}$$

27. (2) $2 \times 5 = 10$

$$3 \times 6 = 18$$

$$4 \times 7 = \boxed{28}$$

Therefore, the number 30 is wrong in the series.

28. (1) $15 + 6 = 21$

$$21 + 9 = 30$$

$$30 + 9 = 39$$

$$39 + 9 = 48$$

Therefore, the number 28 is wrong in the series.

29. (4) $225 = 15 \times 15$

$$169 = 13 \times 13$$

$$144 = 12 \times 12$$

$$100 = 10 \times 10$$

$$64 = 8 \times 8$$

$$\text{But, } 48 = 6.928 \times 6.928$$

30. (4) $60 \Rightarrow 6 + 0 = 6$

$$120 \Rightarrow 1 + 2 + 0 = 3$$

$$210 \Rightarrow 2 + 1 + 0 = 3$$

$$336 \Rightarrow 3 + 3 + 6 = 12$$

$$1716 \Rightarrow 1 + 7 + 1 + 6 = 15$$

$$720 \Rightarrow 7 + 2 + 0 = 9$$

$$990 \Rightarrow 9 + 9 + 0 = 18$$

$$504 \Rightarrow 5 + 0 + 4 = 9$$

$$\text{But, } 1310 \Rightarrow 1 + 3 + 1 + 0 = 5$$

Except 1310, in all other numbers the sum of digits is multiple of 3.

Therefore, the number 1310 does not fit into the pattern.

31. (2) A $\xrightarrow{+4}$ E

$$G \xrightarrow{+4} K$$

$$Y \xrightarrow{+4} C$$

$$M \xrightarrow{+4} Q$$

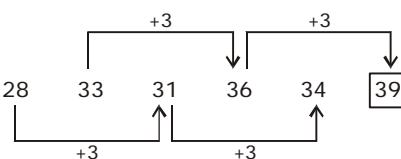

$$X \xrightarrow{+4} B$$

$$R \xrightarrow{+4} V$$

$$L \xrightarrow{+4} P$$

But, W $\xrightarrow{+3}$ Z

32. (1)

33. (4) $7 \times 8 = 56$

$$56 \times 8 = \boxed{448}$$

$$448 \times 8 = 3584$$

$$3584 \times 8 = 28672$$

Therefore, the number 447 is wrong in the series.
